PROFILE

I decided to change my career path two years ago, taking my experience of working in a team with me and beginning a new journey with Test Automation and Web Development. I started nearly two years coding school and became completely hooked. During the courses, I enjoyed the challenges and the effort required to overcome them, the feeling of success that came at the end, an anticipating the new challenges to come. Several years of experience in Management as a System Engineer knowing that I will keep earning, as well as keep facing new challenges and continue to solve them, has led me to become incredibly integrated into the field of web development.
